

TURBO-PRO®

Plus Rumensin

A supplementary feed for weaner and young growing cattle

Turbo-Pro® contains a combination of by-pass protein from copra meal, and urea to stimulate rumen microbial activity resulting in more microbial protein for the animal.

Rumensin® 100 has been included into Turbo-Pro® at the rate of 1.2 g/kg. At the recommended intake of 250 or 500 g/head/day the animal will receive 30 to 60 mg of monensin active (the active ingredient in Rumensin®) per day.

Rumensin® is a rumen modifier that improves the efficiency of ruminant digestion by altering the ratio of volatile fatty acids in the rumen. This causes an increase in energy availability from the feed consumed. Monensin is also a very potent coccidiostat used as an aid in the prevention of coccidiosis in young cattle.

Turbo-Pro® plus Rumensin® fills the gap between what protein deficient pastures offer and what young cattle require for growth and productivity.

Over the short term, Rumensin® is added as an aid in the prevention of coccidiosis in weaner cattle. Longer term feeding of **Turbo-Pro® plus Rumensin®** can lead to:

- Improved feed efficiency
- Improved growth rates
- Improved reproductive performance

| Turbo-Pro® plus Rumensin® ANALYSIS | | | |
|---|-----------|------------|--------------|
| Urea | 7.2 % | Iron | 98.5 mg/kg |
| Min Calcium | 0.92 % | Copper | 25 mg/kg |
| Min Phosphorus | 5.6 g/kg | Manganese | 49.8 mg/kg |
| Crude Protein | 40 % | Zinc | 66 mg/kg |
| Sulfur | 4 g/kg | Vitamin A | 20,000 IU/kg |
| Max Salt | 0.8 % | Vitamin D3 | 2,000 IU/kg |
| Cobalt | 0.3 mg/kg | Vitamin E | 100 mg/kg |
